

Adverse Childhood Experiences (“ACEs”) Questionnaire

The attached self-administered ACEs questionnaire consists of ten questions intended to identify traumatic events involving abuse, neglect, and household dysfunction experienced during childhood (prior to age 18). The client shall answer “yes” or “no” to each of the ten questions. The total number of “yes” answers results in the client’s ACEs score. The higher the ACEs score, the more likely the client is at risk for negative physical and mental health/behavioral outcomes.

Scoring the client’s number of “yes” answers to the questions will aid the U.S. Probation Office, Bureau of Prisons (if incarcerated), and contracted treatment providers in connecting the client with appropriate support and treatment.

(While the questions contained in this form are personal in nature and may elicit memories of difficult childhood experiences, the intent of the questionnaire is to identify treatment and support needs, with the goal of furthering the client’s success.)
